

The Management of **TECNOLOGIA Y FABRICACION S.A. - BRAID**, is fully aware of the importance of **Quality** as a fundamental part of its policy and **strategy to achieve the complete satisfaction of both internal and external stakeholders, based on compliance with established work processes, client requirements, legal obligations, and by anticipating their expectations.** The Management, together with all members of the organization, is responsible for maintaining and improving the **quality management system**. For this reason, we present the key values in which we firmly believe:

1. **To build trust** with our customers and other stakeholders through improvements in product and service quality, as well as in quality management.
2. **To establish effective communication channels** with customers, suppliers, and other stakeholders to adapt to their needs and expectations.
3. **To enhance the effectiveness** of BRAID's quality management system by focusing on doing things right the first time, with the aim of improving and organizing our processes to secure the future of both our company and the organization.
4. **To control the stages of wheel development and manufacturing**, from the initial design phase to the final finishing stage, ensuring BRAID guarantees a quality and reliable product.
5. **To provide employee training** based on the experience of our organization, including lessons learned and past successes.
6. **To strive for excellence and continuous improvement** by identifying opportunities for enhancement in quality management, as well as in relationships with customers, suppliers, and other stakeholders, directing efforts towards controlling and correcting non-conformities, and preventing their causes, with the goal of optimization.
7. **To engage, motivate, and empower** the people within the organization to evolve and adapt constantly and flexibly to the market's needs and demands.
8. **To disseminate the Quality Policy** to all personnel within the company, communicating new processes, and focusing on successful projects to achieve quality objectives.
9. **To facilitate the generation of new ideas and proposals** by creating the appropriate communication channels.
10. **To provide safe and healthy working conditions** to prevent work-related injuries and health deterioration, establishing and reviewing objectives aimed at eliminating hazards and reducing risks related to Occupational Safety and Health.

In conclusion, we believe these guidelines will help us achieve our objectives, continuously improve, and become a leading company in the aluminum wheel manufacturing sector.
